

**linear algebra and its applications (fourth edition)** - linear algebra moves steadily to  $n$  vectors in  $m$ -dimensional space. we still want combinations of the columns (in the column space). we still get  $m$  equations to produce  $b$  (one for each row). those equations may or may not have a solution. they always have a least-squares solution. the interplay of columns and rows is the heart of linear algebra.
